

ROCOL Wire Rope Lubricant

Product information

General: Offshore operators can depend on a single wire rope and ROV umbilical lubricant in all operating conditions. There is no risk of BIOGEN WIRESHIELD going brittle at very low temperatures, and at the highest operating temperatures, such as those endured by the wire ropes in active heave compensation (AHC) systems, the lubricant performs to the same high standard without melting and dripping onto decks, preventing a safety risk.

Temperature range: 50°C to +180°C

Part code	Size	Model
1425	18	biogen wireshield pail
1425	160	biogen wireshield barrel
