## Height Safety Knowhow

*Here you'll find informative videos which show you what equipment to use, how and when. All designed for when working at height of risk.*

These kits will enable you to reduce the risk of a fall from:

**Restraint** - not allowing you to get to a position where you could fall.

**Positioning** - allowing you to work comfortably at height.

**Fall arrest**- allowing a minimal fall when working in positions where risk can be minimalised but not eradicated.

The videos are for the most common types of work:
