Reid Lifting

REID Lifting specialises in lightweight portable gantries and davit systems that can be rapidly deployed with simple manual assembly and is ideal for use on hard to reach sites and difficult terrain. They provide bespoke lifting solutions for many markets including water & wastewater industries, oil & gas, construction and height safety. REID Lifting supply portable lifting solutions for a range of applications for companies such as Jaguar Land Rover, the Vatican, Heathrow Airport, London Underground and the British Museum. Based in Chepstow, REID Lifting engineer and patent it's own designs and extrusions, build their own prototypes and type test all systems at third party UKAS accredited laboratories. Designed to exceed EN795 Type B criteria, REID Lifting aluminium cranes are fully compliant for personnel (man-ride), fall arrest and retrieval applications. REID Lifting drives continuous innovation in relation to materials, designs and product development. Winner of three Queens Awards, REID Lifting have been recognised for Innovation and International Trade on a global stage.
