Fall Arrest Blocstop™ BSA

Product information

An additional safety system in accordance with EN 1808 is mandatory in man riding applications. The system is used to secure the work l That is precisely what our Blocstop does. They are small, light and compact and attached to the working platform where the safety rope runs. **BSA – Blocstop for the detection of inclination of the platform or slack of wire rope:** supported to the BSA, the BSA clamping jaws clamp the suspension rope breaks the platform by monitoring the BSA suspension rope. The BSA In precisely the same way as the BSO, the clamping jaws clamp the safety rope and prevent the load or the platform from falling. Despite this, the BSA does not prevent the lowering of the platform and therefore it is required to use a separate system to monitor the tilt of the platform.
