EXTREEMA® Roundslings

Bio-based Dyneema® jacket

Red inner signal warning sleeve

Product information

Unlike braided fibre ropes, the construction of our EXTREEMA® is based on parallel laid fiber technology that make up the core. The core covering EXTREEMA® is always made of 100% high strength ultra high polyethylene (UHMWPE) with Dyneema® jacket. These round slings are now produced bio-based with Dyneema® jacket. The sleeve covers the core to keep the core from getting damaged and to get the most out of it. It is a consideration to protect the product.

Dyneema® advantages:
