Ferrule TCU Talurit®

Product information

The expected life (TUE) of a galvanized stainless steel wire rope to avoid galvanic corrosion. The pressing of TCU ferrules requires approx. 10% of the breaking load (MBL) of the wire rope. The ferrules are pressed in a way that the strength of the ferrules is at least 90% of the strength of the wire rope. The ferrules are pressed in a way that the strength of the ferrules is at least 90% of the strength of the wire rope. These ferrules have been validated according to TALURIT™ splicing system, which is within the framework of EN 13411-3. The copper mat
