

TR52 - CRANE ROPE INSPECTION - 1 DAY

COURSE AIM

The aim of this course is to provide delegates with knowledge of the most up to date examination and discard criteria. The course looks at different types of crane rope construction, the different modes of rope deterioration and the current standards and legislation that apply to steel wire rope examination.

The course is considered suitable for those having little or no knowledge of rope inspection/examination and rope products in general, as well as, those more experienced individuals wishing to update themselves with the most up to date published standards and codes of practice.

Each course delegate will be expected to complete a short theory test to demonstrate a good understanding of the course contents. If successful, a certificate will be issued. This will help the Employer to address certain legal requirements by being able to demonstrate employee competency. A detailed course handout is also provided for future reference.

DURATION

The standard course is intended to last for 1 day. Bespoke courses can also be discussed upon application.

LOCATION

The course is generally held at our Head Office at Harworth, however we are also able to utilise other Certex locations, or hold courses at Client premises if adequate facilities are available.

WHAT DELEGATES WILL NEED TO BRING

Each delegate is required to produce photographic ID on the first day of the course. Failure to do so will result in the delegate being unable to attend.

FURTHER COURSES & INFORMATION

Certex UK offers a range of standard training courses as detailed on our web site and bespoke training courses can be tailored to suit your specific needs. Many of our standard courses are LEEAA certified. For further information or to discuss your requirements in more detail, please contact our Training Team on +44 (0) 1302 756777.
